Mirrorless 24-70mm Shootout: Which Lens Wins in Sharpness vs Expense?

JAN 13, 2020

JARON SCHNEIDER

Share 923

119 COMMENTS

It took a little while, but we finally have the “desert island” 24-70mm f/2.8 lens for every major full-frame mirrorless system on the market, with some lovely crossover as well thanks to the L-Mount Alliance and Sigma’s continued support of E-mount. Though RF and Nikon Z are a bit on their own at present, E-Mount and L-Mount, which encompass a huge number of cameras, now have a lot of options.

With Panasonic Lumix and Sigma getting their 24-70m f/2.8 lenses to market here in 2020, I wanted to take their offerings along with the Sony 24-70mm f/2.8 G-Master, the Canon RF24-70mm f/2.8 L, and the Nikon Z 24-70mm f/2.8 S out to photograph the same subject from the same distance and see which one I preferred.

Portrait Light: Enhancing Portrait Lighting with Machine Learning

Friday, December 11, 2020

Posted by Yun-Ta Tsai¹ and Rohit Pandey, Software Engineers, Google Research

Professional portrait photographers are able to create compelling photographs by using specialized equipment, such as off-camera flashes and reflectors, and expert knowledge to capture just the right illumination of their subjects. In order to allow users to better emulate professional-looking portraits, we recently released [Portrait Light](#), a new post-capture feature for the Pixel Camera and Google Photos apps that adds a simulated directional light source to portraits, with the directionality and intensity set to complement the lighting from the original photograph.

Portrait Light: Enhancing Portrait Lighting with Machine Learning

Friday, December 11, 2020

By placing a subject in the Light Stage and photographing that model multiple times with one of **64 differently positioned cameras** and **combining those with the 331 individually programmed LED light sources** of the Light Stage, the developers were able to simulate different lighting conditions that the AI would need to understand.

<https://petapixel.com/2020/12/14/apples-highly-anticipated-proraw-is-now-available/>

Earlier today, [Apple officially released](#) Apple ProRAW via iOS 14.3. This new hybrid image format claims to give you the best of both worlds: AI-powered computational photography on the one hand, and the flexibility of a 12-bit RAW file on the other. But does it deliver the goods? In a word: yes.

9 COMMENTS

While the idea of a curved CMOS sensor is not new, all companies to this point have only developed them as an in-house proposal project and not as a finished, commercially-ready finished product. That [has changed](#) thanks to startup, [Curve-One](#).
