Longer Lenses for Street Photos

Layer Elements with Longer Lenses in Street Photography

One of the most effective ways to fill a frame with information is to layer elements of your composition, either in two dimensions along the X and Y axis or in three with the Z axis.

35mm

Simple photographs with only one important piece of information, like a portrait or product shot, don't necessarily need information to exist in more than one plane, and often great effort is put into making the background as simple and uncluttered as possible, either via depth of field or composition.
